## THE CHORUS LADY

Novelized From Forbes's  
Play of the Same  
Name by  
John W. Harding

Continued From Saturday.

The joy of the old woman when at the supper table he announced his plan and extended his invitation was a rich recompense for the sacrifice of expense it involved. For Mallory was very fond of her. O'Brien's satisfaction was scarcely less than that of his wife. Doubts and fears were dispelled as though by magic. Mrs. O'Brien recovered there and then her old time energy. A proposal by Mallory that she should keep the news of their coming from the girls and take them by surprise was adopted with almost childish enthusiasm.

The few days of preparation were busy and lively ones. O'Brien was so glad to see his wife herself again that he enjoyed the ordering about, admonishing and snubbing that seemed to be part and parcel of all extraordinary occasions and from which for several weeks he had been absolved, his spouse

having been too apathetic to take an interest in things. The trip was an event of no small importance to both of them. They had not been to New York in many a long year and had been able to judge of the transformation the city had undergone during that period only from the descriptions given by Patsy when she came home for the holidays and from the pictorial postcards the girls sent to them from time to time. Such an overhauling of long hidden and carefully preserved treasures of the wardrobe the journey necessitated had never occurred in the household.

At last the great day when the trio found themselves amid the towering buildings of Manhattan arrived. It was early evening when, a little tired from their long journey, but buoyed by excitement and expectancy, they reached the metropolis and put up at a hotel near Times square, where Mrs. O'Brien arrayed herself in her gala attire, and Mallory telephoned to Crawford's residence and to McGovern, the prospective purchaser of Lady Belle, who promptly followed this call

with a visit. Then after refreshing themselves with a substantial meal they set off for the theater, the old couple, gleeful at the thought of the glad surprise they had reserved for the girls and prepared to enjoy the treat of their lives in seeing them act.

It was with much ceremony and a proud consciousness of the attention she was attracting that Mrs. O'Brien took her seat in the orchestra with her husband and Mallory. But soon after she had settled down and looked about her she was much vexed to discover that she had no fan. This was an awful oversight. How could any one sit in a theater in a black silk dress and lack a fan!

"Pat," she demanded in a stage whisper, "didn't O have a fan wanst?"

O'Brien, with a very dim recollection that at some remote period she had possessed this coquettish article, replied:

"O believe yez did."

"This phwy didn't ye think to bring it?" she wanted to know.

"O! disremembered that yez had such a thing," he answered apologetically. "Did yez told it among the clothes?"

"Ye're the most contrarist man," she said, ignoring the question. "Ye niver think av anything when it's for me. I do believe yez forgit yir head if it wasn't screwed on."

"Can't ye use yir handkerchief or yir programme?" he suggested.

"Patrick O'Brien," she exclaimed, "O'm ashamed of ye. Wheriver did yez learn such manners?"

O'Brien subsided, and Mallory, telling them he would rejoin them after the first act, went out to seek Crawford. First of all, however, he repaired to the stage door and, having ascertained that Patsy was upstairs, sent his message announcing their presence in the theater.

While Dan was on his way uptown,

chuckling at the thought of the astonishment and delight of the girls, the O'Briens were trying in vain to recognize their darlings among the array of beauties on the stage. Throughout the first act the mother was straining her eyes and fidgeting and demanding of O'Brien whether he could see them. He had to confess that he could not, and a dime-in-the-slot opera glass failed to aid them, except to the extent of confirming Mrs. O'Brien's pronouncement that none of the girls was Patsy or Nora. At the conclusion of the second act, when they had not appeared, her growing conviction that something was wrong became a certainty, and with wild alarm she started out to investigate.

## CHAPTER XII.

FEELING perfectly safe behind the door which already had sheltered her so effectively and familiar now with the room, Nora was seated on the bed. She was tired of trying to listen to the conversation she could not hear, except as a confused murmur, and having regained her composure was waiting for Patsy to go and intending to follow her at once. She realized that Crawford had gone too far, was dangerous, as Patsy had warned her he was and that it behooved her to be extremely careful. She surmised that her sister had come to get the note and, not hearing her voice raised in anger, assumed that Crawford had succeeded in mollifying her and that everything was going along all right. She wondered at the length of her stay, however, and was getting impatient.

## MINING NEWS.

MINES ARE ACTIVE  
NEAR SILVER CITY

Concentrates Shipped to El Paso—Ore Bodies Are Uncovered.

Silver City, N. M., March 28.—A shipment of concentrates from the Socorro Mines company for El Paso, has arrived, valued at \$1500 per ton. Four large gold-silver bricks, valued at \$8000, have arrived from the Earnestine Mining company, Mogollon, N. M. E. Craig being the owner of the Earnestine mines.

This property is developed to a depth of 1200 feet. The vein is about 20 feet wide at this depth and much higher grade is encountered on the 1200 foot level than at any other portion of the mine.

The Earnestine mine is now in better shape than ever to supply the increased tonnage necessary to supply the 40 stamps. The mill is ideal in every respect. The large Corliss engine, which is belted to a Westinghouse 31 phase 175 K. W. generator, runs perfectly.

**Good Ore Uncovered.**  
A large and ever increasing ore body is being encountered in the Top mine. What the showing here portends, with the 750 foot back, is very significant.

The face of the vein is blue feet six inches wide and runs 600 grab sample. The rich streaks are pure argentite or brittle silver, which separately runs 1500. The largest streak hugs the hanging wall, with minor streaks disseminated throughout the face of the drift. The importance of this strike at this depth, 150 feet below the Socorro mine's 600 foot level, is realized, as the same will obtain in all the mines of the district when this supposed sulphide zone is reached.

**The Little Fannie.**  
In the Little Fannie some five different ore chutes have been opened up on the 500 foot level, by upraises, and on the 600 level is a breast of ore five feet wide of 325 ore.

The Deadwood mine, managed by Earl C. Cleveland, is the scene of great activity. It is said to have nearly 100,000 tons of ore blocked out, though it has only reached a depth of 400 feet. The ore bodies are 150 feet above the rich strike in No. 17 of the Last Chance, which gives some idea of the possibilities of the Deadwood and Last Chance lodes, which parallel for some thousands of feet and are supposed to merge on the Sunburst mine, which is the extension of the Deadwood, south.

**Rich Ore Taken Out.**  
In "Red C," on the Willis claim, rich horn silver was taken out by Maj. Braxton, netting \$15,000. In vein No. 12, which crosses vein No. 25, the ore averaged 600 ounces silver per ton. On vein No. 19, 12 inches wide, quartz and horn silver were taken out, together with some 300 feet of crosscut, two tunnels of about 250 feet and 95 feet, respectively, and about 1000 feet of open cuts.

The character of the ore is sulphide, and the metals are the same as silver, copper and a small amount of gold. The ore will average without sorting from \$40 to \$50 a ton, and with sorting, some very rich ore is found in pockets running several thousand ounces silver per ton.

**New Furnace Blown In.**  
At CHIHUAHUA SMELTER.

Chihuahua, Mex., March 28.—The American Smelting and Refining company has put in operation the second of its new furnaces of the Chihuahua plant, has produced horn silver running 15,000 ounces a ton, found in quantity at the surface.

There are various improvements on the properties, consisting of 10 stone houses, horse whips, windlasses and a gasoline hoist, with capacity of 1250 feet depth, tram cars and tracks.

## MINING NEWS.

EL PASOANS WORK  
MEXICO MINES

Extensive Development to Be Made on the Braxton Property.

The San Pablo Development company, composed of El Paso people, has recently taken over the group of silver mines formerly known as the "Braxton mines," situated in the range of hills called the "Sierras de Las Inas," in the Braxton district, state of Chihuahua, Mexico, six miles east of Ojo Caliente, a station on the Mexican National, 90 miles south of El Paso.

The names of the properties constituting the group are the Willis, the Constancia, the Tesoro Escondida and the Bismuth, aggregating 20 pertenencias, or about 75 acres of mineral ground. These properties were deeded by Maj. A. C. Braxton in 1893, and have been owned and operated by him, on a small scale, till the present time. He has taken out of the property and sold to the smelter of El Paso nearly \$50,000, doing all this unaided by outside capital and starting with very limited means.

There is at this time about 5000 feet of work on these properties, consisting of open cuts, tunnels, shafts and drifts, of which much work of excavation, done merely for exploration work.

**Development.**  
Geologically the formation is limestone and porphyry, and the strike of the main veins are northeast and southwest, with a stock work of smaller veins all over the property, the dip of the veins being nearly perpendicular. The width of the main vein varies from two to eight feet. Some of the lodes have been traced over three quarters of a mile in length.

The development work consists of two shafts, one of which is down 445 feet and the other down 78 feet, together with some 300 feet of crosscut, two tunnels of about 250 feet and 95 feet, respectively, and about 1000 feet of open cuts.

The character of the ore is sulphide, and the metals are the same as silver, copper and a small amount of gold. The ore will average without sorting from \$40 to \$50 a ton, and with sorting, some very rich ore is found in pockets running several thousand ounces silver per ton.

## WALTHAM WATCHES

The Authentic American Watch

It is universally acknowledged that the United States has produced the best machinery in the World. American agricultural implements, electrical machinery, locomotives, clocks and Waltham Watches lead in the markets of the World. As long ago as the Centennial Exhibition in 1876, the Commissioner from Switzerland visited the Waltham Watch factory and picked out a watch at random from a lot of others. When he returned to Switzerland he told the Swiss Watch Manufacturers that not one Swiss watch in 50,000 would compare with that Waltham watch he had picked up haphazard at the Waltham Factory. A statement even more true now than then.

We advise you to buy a Waltham Watch adjusted to temperature and position and to buy only from a jeweler because he can regulate it to your personal habit and occupation. Never buy from Mail Order Houses. They cannot have the thorough knowledge or the equipment for regulating high grade watches.

WALTHAM WATCH COMPANY,

WALTHAM, MASS.

Send for the "Perfected American Watch," our book about watches.

## MINING NEWS.

CHINO TO PUT IN  
REDUCTION PLANT

Copper Company to Spend \$250,000 For Improvement—Big Ore Tonnage.

J. M. Scully, general superintendent of the Chino Copper company, reports it now has over 16,000,000 tons of ore blocked out in its mines. The Santa Rita is about the busiest camp in New Mexico, as a result of Chino activity, and as soon as the reduction plant is completed and put in operation, the district will take rank with the Miami and Ray camps of Arizona, and the El Nevada, and Bingham, Utah canyon camps, in the magnitude of its operations and production of the red metal.

In the office of territorial engineer Sullivan at Santa Fe the Chino Copper company has filed its application for 2,169 second feet of water from Apache Tejo spring, near Santa Rita, Grant county, New Mexico, to be utilized for mining, smelting and other purposes, the proposed works to cost \$250,000.

This is the first announcement of the future plans of the Chino Copper company in regard to its concentration plants and came out in the ordinary routine of procedure to secure water rights for the big reduction works that it is undertaking.

**PLAN TO INSTALL 30 STAMP MILL.**  
New York-Arizona Company Pushing Work in the Morenci District.

J. A. Wester, manager of the New York-Arizona Gold and Copper Mining company, which owns a group of 30 claims near Morenci, says the company intends to put in a 30 stamp mill to treat the ores from the Buzzard Shadow and Lillian claims. He reports work on the properties is progressing satisfactorily.

The tunnel which was started on the Lillian claim, and is now in the Buzzard Shadow claim, has reached a distance of 1400 feet. The vein which surveys about two feet in width, carries gold that runs from \$40 to \$1000 to the ton, and also good values in silver and copper.

Considerable ore has been taken out and the stamp mill is planned to reduce the ore, which will later be treated by cyanide.

Good copper showings are found on the other claims of the company, he says, and the prospect is good for opening up another big copper camp in the Morenci district.

STRIKE MADE IN  
HASSAYAMPA CAMP

Good Values in Gold Ore Uncovered in Big Ring Property.

Reliable information of what appears to be the richest mineral find made for a long time in the Hassayampa district, Arizona, has reached here. Ore carrying rich gold values was uncovered in the main crosscut of 175 feet from the face of the opening in the Big Ring

property. Drifting is in progress on the pay streak which has been exposed several feet, showing continuity in size and values. The ore was encountered at a depth of 120 feet below the apex of the vein.

The mine was formerly known as the Kent mine and was purchased several months ago from W. C. Kent and now work has begun on modern ideas. It is located on the Senator range, a mile west of the Senator mine, and half a mile west of the old Howard mine, which produced some of the richest gold ore ever mined in the district.

**TIGRE TO INSTALL CYANIDE PLANT.**  
Mill to Be Installed at a Cost of \$400,000—Much Ore in Sight.

A big cyanide plant, capable of handling 500 tons of rock a day is to be erected at the Lucky Tiger mine in Sonora. There are 50,000 tons of old tailings ready for handling when this new plant is installed, which it is claimed will net \$7 a ton. Besides this there is an immense tonnage of ore in sight in the mine that will not pay to ship to smelters under present tariff rates, but which can be profitably treated by the ber of the house today. "I suspect that the new plant will cost about \$400,000."

## TURQUOIS FOUND

**NEAR SHAFTER, TEXAS.**  
Marfa, Texas, March 28.—Prospectors recently brought to Marfa a number of fine specimens of sky blue turquoise found seven miles west of Shafter. It has been known for some time that valuable deposits of this stone existed in that locality, but the land upon which it is located belongs to a number of holders, which prohibited its being mined. People here will make an effort to obtain permission to prospect the premises and mine the stone. The larger amount of that which has been found has a sky blue cast and takes a fine polish.

**SAN PEDRO PROPERTY MAY GO TO U. S. SMELTING COMPANY.**

Chihuahua, Mex., March 28.—It appears to be quite certain that the American interests which have the option on the great silver-lead mines, known as the San Pedro, in the Naica district, for \$300,000 pesos, are those of the United States Smelting, Refining and Mining company. The mining men of this state are very hopeful that if the deal is consummated that it means a custom smelter at some point in Chihuahua independent of the Guggenheim. It is known that the United States company is anxious to get hold of some large mines in Mexico. It was this company which bought the great Real del Monte mines at Pachuca, Mex., about three and a half years ago.

**FOR W. W. C. A. GIRLS.**  
Dr. Lyman B. Sperry will speak to the young women of El Paso next Thursday evening at 7:30 in Trinity church on the subject, "Woman and Her Problems."

At the association parlors in The Herald building this evening at 7:30, Mrs. Kenneth Brown, with eight assistants in beautiful foreign costumes, will give an interesting program. No admission fee will be charged.

The busiest and mightiest little thing that ever was made is Chamberlain's Stomach and Liver Tablets. They do the work whenever you require their aid. These tablets change weakness into strength, listlessness into energy, gloominess into joyousness. Their action is so gentle one don't realize they have taken a purgative. Sold by all druggists.
